

ECE 282 Lab 1

Logan Floyd

1. Command Practice

- a. date - displays the system date and time
- b. who - shows who is logged on
- c. whoami - displays the username of the user who is logged in
- d. who am i - displays the original username of the user who is logged in
- e. pwd - prints the name of the working directory
- f. cd - changes to a specific directory
- g. mkdir - makes a new directory that you name
- h. rmdir - removes a specific directory
- i. rm - removes a specific object
- j. cp - copies a file from one location to another
- k. mv - moves one or more files or directories from one location to another
- l. ls (-l -g) - lists files and directories present in the current directory
- m. cat - combines and prints the contents of files
- n. more - displays the contents of text files in the command prompt
- o. less - also displays the contents of text files in the command prompt, however it does not have to read the entire contents of the text file before starting so it displays faster, and it can run on a variety of terminals
